

# VACUUM <sub>f</sub> SPACE ENERGY (VfSE)

## Blockchain Based Founding

February 2018

### Abstract

Every point (and therefore everything) in the universe is connected to every other point and thing in the universe by the space. You may think of space as being empty, but science has proven that space is actually full of sub-quantum vibrations called "vacuum fluctuations" that when all added up equal nearly an infinite amount of energy. This field of energy has been given a lot of names over the decades: the aether, the quantum foam, the vacuum etc, call it whatever you like, the space that fills everything also connects everything and out of this space the energy of the future will come from.

# 1 Value Proposition

We propose Vacuum (f) Space Energy token (VfSE) as a token of investment into limitless clean energy.

## 2 Introduction

Vacuum Foundation (VF) is committed to advancing the research and education of vacuum, as well as collaboration with other researchers and inventors to make relevant findings available to the public.

### 2.1 Mission

Vacuum (f) Space Energy token (VfSE) like other coins is embarking on an ambitious project that will make cryptocurrencies viewed outside of the cryptocurrency world as something very beneficial. Our mission is to raise funds for scientific development and provide grants to deserving applicants. Token holders as investors into breakthrough technology will have the power to leverage innovation as broadly as possible.

### 2.2 Vision

Our vision is to help human civilization evolve to the point when it will be able to control gravitational field and be able to harvest energy directly out of the vacuum.

### 2.3 Benefits

Tapping into the network of the structure of space will open incredible possibilities. This will be a quantum leap in human evolution and Vacuum Foundation will be part of it.

## 3 Blockchain

A blockchain, originally blockchain, is a continuously growing list of records, called blocks, which are linked and secured using cryptography. Each block typically contains a hash pointer as a link to a previous block, a timestamp and transaction data. By design, blockchains are inherently resistant to modification of the data.

### 3.1 Token Technology

The Vacuum (f) Space Energy token (VfSE), a token based on Ethereum, is an important element of a new marketplace. Ethereum is an open source, blockchain-based, distributed computing platform oriented towards smart contracts. Effectively, Ethereum is a distributed

virtual machine that allows end users to construct smart contracts for transactions. Smart contracts are stateful applications stored in the Ethereum blockchain. These contracts are cryptographically secure and can verify or enforce performance of the contract. token contracts are a standard feature of the Ethereum ecosystem.

Ethereum has been used for mobile payment systems, distributed exchanges, tokens pegged to commodities and fiat currencies, market clearing mechanisms, micropayment systems for distributed computing resources, commodities and securities exchanges, crowdfunding, and legal document verification.

## 4 Foundation Landscape

Vacuum Foundation (VF) is committed to advancing the research and education of vacuum, as well as collaboration with other researchers and inventors to make relevant findings available to the public.

### 4.1 Interconnectedness

Interconnectedness is part of the terminology of a connected worldview which sees a oneness in all things. That which unifies, and integrates, and creates oneness. (as opposed to "negative", which creates separation).

### 4.2 Roadmap

- Assembling of a new working team and official registration (European Union)
- Detailed specification of roadmap (goals, plans, and their execution)
- Creation of new smart contract (DApp) where token holders vote on issues (investments, grants, expansion...)
- Expanding awareness and adoption of the Vacuum Foundation (international recruitment of ambassadors, awareness campaigns...)

### 4.3 Team Members

#### **Peter Šumnik, founder, and ambassador of Vacuum Foundation**

Created VfSE, smart contract and web page @ <https://vacuum.foundation/>

## 5 Token Launch

The Vacuum (f) Space Energy token (VfSE) sale starts 13th of March 2018.

### 5.1 Token Launch Summary

Our goal is to sell a maximum of 100.003 (one hundred thousand and three) VfSE tokens and a minimum of a symbolic amount of 0.01 VfSE (also smallest possible amount of VfSE to buy). Some of the numbers may change with ETH/USD exchange rates and volatility. Reaching minimum will allow us to continue exactly where we have started while reaching anything above that will speed up the process immensely.

- Exchange rate: 1 ETH = 3 VfSE
- Token contract address: TBD (Published through various channels 48hrs before crowdsale launch date).
- VfSE ICO starts Tue Mar 13 2018 10:13:00 GMT+0800 (Taipei Standard Time).

### 5.2 Preparation for ICO

To participate, you buy VfSE tokens directly and trustless from our token sale smart contract. You do this by sending Ether (ETH) to the smart contract's address which will be published on <https://vacuum.foundation/> on the day of the ICO. The smart contract will automatically send you back (VfSE) to your ETH (ethereum) wallet.

Please have ETH in a wallet that can accept ERC-20 tokens.

We recommend <https://metamask.io/> (MetaMask) or <https://www.myetherwallet.com/>(MyEtherWallet)

You can find more details about wallet compatibility and how to buy ETH (ethereum) on this URL link: <https://tokenmarket.net/what-is/how-to-participate-ethereum-token-crowdsale/>

Do not attempt to send any other cryptocurrency to the token sale smart contract except ETH.

Do not send ETH from your account on exchanges such as GDAX, Coinbase, Bitfinex, Poloniex, Bittrex, Kraken etc. If you send ETH from an exchange account your VfSE tokens may be lost.

If you have ETH in an exchange account, transfer it to your MyEtherWallet or MetaMask wallet first. Then you can send it to the token sale smart contract address from there and your VfSE tokens will be automatically transferred to your MyEtherWallet or Metamask wallet. All transactions sent to the VfSE token Sale smart contract are publicly viewable on etherscan.io.

By participating in the VfSE token sale you are agreeing to the VfSE token sale terms and conditions.

### 5.3 Token Distribution

- Token available to public at launch: 100.003 (one hundred thousand and three)
- Reserved tokens: 31.415.926 (thirty-one million four hundred fifteen thousand nine hundred twenty-six). Token holders will vote (Virtual Voting DApp) on how reserved tokens will be sold and invested in the years to come.

### 5.4 Budget Allocation

- **Administration: 10% of budget** Consists of Vacuum Foundation legal, security, accounting and other associated administration costs.
- **Marketing: 12% of budget** Marketing will focus on expanding awareness and adoption of the Vacuum Foundation and the VfSE solution among people. This also includes the growth and maintenance of the worldwide community.
- **Contractors: 13% of budget** These funds will be directed at third-party providers offering engineering, marketing, growth-hacking, PR, partnerships and more.
- **Contingency: 7% of budget** This is a set-aside for unforeseen costs.
- **Investment: 58% of budget** This financing allows for the rollout of the VfSE solution, including the necessary adjustments to and development of the existing idea.
